Payment Method

Our company is committed to keeping your personal information safe. Our secure server software (SSL) provided by GeoTrust Inc. is the industry standard and among the best software available today for secure commerce transactions. It encrypts your credit card numbers so that it cannot be read as the information travels over the internet.

SSL is a worldwide internet standard that offers encrypted SSL communication 128bit. In order to recognize an encrypted SSL transaction, you will notice on the browser a small yellow lock and will then be linked to a https:// page. Your pc will send its request via encrypted SSL to the banks server. The server sends back to your pc the security certificate, the confirmation that you have visited the correct page and your public key. To continue, your pc uses the public key to encrypt confidential information (e.g. your card number) and sends it to the banks server which uses your public key for decryption.

Pay By Account

By proceeding, you will create an official sales order. No payment is collected via the system, and a pro- forma invoice will be generated. A copy of the sales order will be emailed to you shortly. Please note – your sales invoice may differ from this sales order, due to additional freight charges.
