

# Care & Maintenance of your Polymaster Rainwater Tank

## Thank you for choosing Polymaster as your tank supplier!

Here are some simple tips for care & maintenance of your tank:

- > Rotting leaves in gutter will quite quickly contaminate the water. Therefore regular cleaning of your gutters is important to ensure quality drinking water.
- > Cleaning of sieve should be conducted regular as dirt and silt will build up over time.
- > To prevent sunlight entering into the tank a manhole cover is recommended and can be purchased through your local distributor.
- > We suggest you use water only to clean your tank, in view of preserving original quality.

Please also refer to the Warranty Card outlining installation and conditions of warranty. Also available is a publication 'Enhancing your Water Quality'.

A range of water diverters and leaf guards are available to further help improve the quality of your water if needed.

Thank you!
