WHY CHOOSE POLYMASTER

HIGHEST GRADE MATERIAL

Our premium European diesel - grade polymer gives the ute pack its raw strength, taking tough to a whole new level.

METAL THREAD FILL CAP

A metal fill point means you don't get wear and tear on the thread, so your cap seals tightly every time.

The fill point plate can be unscrewed for a wide access point, if required. There is an additional rubber seal below this plate to ensure a continual tight seal.

IN-LINE FILTER

As the fuel leaves the tank to be pumped out, it passes through a filter. Any debris filtered out is captured in the filter which can be emptied.

HEAVY DUTY ROTATING SWIVEL

Our twin zinc-plated brass swivel rotates to wherever you need to fill from, preventing hose kink.

5 BLADE IMPELLER QUALITY ITALIAN PUMP

The motor in these quality Italian pumps is vertical meaning it dissipates the heat upwards and away from the pump, and therefore reduces wear on the seal.

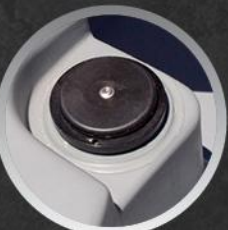

The pump has five impellers, a lot more efficient than a standard four, as it works consistently meaning you always get the same high flow rate, even when lifting the hose to a high fill point or extending the hose to full length.

The motor can be lower-revving as the five blades do more of the work. This means less wear and tear on the pump motor and an increased long-term reliability.

FUEL GAUGE

You'll never run out of diesel unexpectedly. We are the only ones to give you a highly visual fuel gauge.

UNIQUE TWO-WAY BREATHER

No chance of diesel dripping out even if you turn the tank upside down.

EXTRA WEAR PADS

Protecting the base from wearing, the wear pads also lock into the ute tray and raise the base. This allows air flow underneath to reduce moisture build-up and prevent rusting.

PURPOSE BUILT FRAMES

These quality frames are ideal for mounting to any size ute tray, requiring no extra space.

LOCKABLE LID

SECONDARY HOLSTER

Temporarily lock in the nozzle between filling to keep it off the ground and out of the dirt.
