

CHEMICAL DOSING TANKS

THESE CLOSED HEAD DOSING TANKS OFFER A SIMPLE AND NEAT SOLUTION FOR SMALL DOSING APPLICATIONS.

Available in 110 and 210 litre capacities, dosing pumps can be mounted on the flat top of these tanks with the suction line penetrating through the roof.

Litre gradation markings are moulded into the wall of the tanks and when moulded in translucent material, these provide an easy and quick way of monitoring chemical level inside the tank.

Additional to the standard 20mm threaded drain bung at the base, multiple connections can be welded into these tanks.

Also, ask the experts today how Polymaster can offer you a completely bundled package by coupling these tanks with suitable bunds from the Drumsafe™ range.

SEE PG. 18-19 FOR OPTIONS AVAILABLE
